```

1. Scatter Plot (Age vs Experience)

```
plot(employee$Age,
```

```
employee$ExperienceInCurrentDomain,
```

```
main = "Age vs Experience",
```

```
xlab = "Age",
```

```
ylab = "Experience in Current Domain",
```

```
pch = 19,
```

```
col = "blue")
```

2. Line Plot (Joining Year vs Age)

```
plot(employee$JoiningYear,
```

```
employee$Age,
```

```
type = "o",
```

```
main = "Joining Year vs Age",
```

```
xlab = "Joining Year",
```

```
ylab = "Age",
```

```
col = "red")
```

3. Box Plot (Age)

```
boxplot(employee$Age,
```

```
main = "Age Distribution",
```

```
ylab = "Age",
```

```
col = "lightgreen")
```

6. Histogram (Experience)

```
hist(employee$ExperienceInCurrentDomain,
      main = "Experience Distribution",
      xlab = "Years of Experience",
      col = "orange",
      border = "black")
```

7. Density Plot

```
d <- density(employee$Age)
plot(d,
      main="Density Plot of Age",
      col="blue",
      lwd=2)
```

8. Dot Chart

```
dotchart(employee$Age,  
         labels=employee$City,  
         main="Dot Chart")
```

9. Strip Chart

```
stripchart(employee$Age,  
           method="jitter",  
           pch=19,  
           col="red",  
           main="Strip Chart")
```

10. Heat Map

```
numdata <- employee[,c("JoiningYear",
                        "PaymentTier",
                        "Age",
                        "ExperienceInCurrentDomain",
                        "LeaveOrNot")]
```

```
heatmap(as.matrix(numdata),
        Rowv=NA,
        Colv=NA,
        scale="column",
        col=heat.colors(100))
```

11. Mosaic Plot

```
mosaicplot(table(employee$Gender,
                  employee$LeaveOrNot),
            main="Gender vs Leave",
            color=TRUE)
```

4. Pie Chart

```
pie(table(employee$Gender),
    main="Gender Distribution",
    col=c("pink", "lightblue"))
```

Gender vs Leave

Gender Distribution
